PROFESSIONAL SUMMARY

I am a fourth-year Information Technology student with a clear goal of building a long-term career as a Full-stack Developer. I am looking for an opportunity to gain practical experience, learn from experienced professionals, and strengthen my skills through real-world projects. In the future, I hope to continuously improve my technical knowledge, take on greater challenges, and grow into a well-rounded Full-stack Developer.

EDUCATION

University of Economics - Technology for Industries (UNETI) 2023 - Present

Bachelor of Information Technology

GPA : 3.28 / 4.0 **English :** TOEIC 650

WORK EXPERIENCE

PNP Solutions — Software Developer Intern Sep 2026 – Nov 2026

- Designed and implemented the sensor management interface based on project requirements.
- Developed APIs to retrieve and display sensor data for monitoring purposes.
- Implemented CRUD APIs to support data creation, retrieval, updating, and deletion.
- Debugged and fixed API issues to improve application functionality and reliability.

SKILLS

- Programming Languages: TypeScript,JavaScript
- Frontend: React.js, Redux,MUI, TailWind
- Backend: Node.js, Express.js,NestJs, RESTful API, Socket.IO, JWT, Joi, RBAC,Pug
- Database & Caching: Postgresql,MongoDB, Mongoose, Redis
- Testing & Tools: Jest, Postman, Git, GitHub
- CI/CD & Deployment: GitHub Actions, Vercel, Render
- Containerization: Docker, Docker Compose

PROJECT

Trello Clone — Project Management & Collaboration Platform Backend Frontend

FullStack Developer

Tech stack: React.js, Redux Toolkit, MUI v5, Node.js, Express, Socket.IO, MongoDB, Redis, JWT, dnd-kit, Jest, Docker

• Architected a real-time collaborative Kanban engine using **Socket.IO** and **Express.js**, supporting concurrent **drag-and-drop** board state **synchronization** and **instant member notifications** with **sub-second latency.**

• **Mitigated database** write spikes during continuous **drag-and-drop** by engineering a **Redis** write-behind debouncing mechanism (500ms window), buffering frequent ordering mutations before committing to MongoDB while proactively invalidating stale board caches.

• Enforced enterprise-grade security & authorization via a dual-token **JWT** flow (HTTP-only cookies with silent **Axios interceptors**), **hierarchical RBAC** (Owner ➔ Member ➔ Card Member), and **Redis-backed rate limiting** (5 attempts/5min on auth endpoints).

• Maintained high code reliability with **>92% test coverage** across **37 suites** (294 unit & integration tests) utilizing **Jest & Supertest**, enforced by strict **Joi** schema validations and automated **MongoDB TTL indexing** for 30-day soft-delete lifecycle management.

Light Decor — E-commerce Platform for Home Lighting Github Demo

FullStack Developer

Tech stack: Node.js, Express, PostgreSQL, Pug (SSR), JWT, Google OAuth, Google Gemini API, Cloudinary

- Full-Stack E-commerce: Built customer storefront and Admin/Staff Dashboard for product, order, and staff management.
- AI-Powered Recommendations: Integrated Google Gemini API for personalized product recommendations with persistent chat memory.
- Security & Transactions: Implemented JWT, bcrypt, Google OAuth 2.0, RBAC, and atomic transactions to prevent inventory inconsistencies.
- Media Optimization: Integrated Cloudinary CDN for image transformation and optimized delivery.
